Certifications

Google: Inteligência Artificial e Produtividade

Certificate of completion: Claude 101

Quality Assurance: plano de testes e gestão de bugs

Organização de Equipes Ágeis: os papéis existentes em uma equipe

Certificate of completion: Claude Platform 101

Lucas Nascimento

QA Engineer | Playwright & Cypress | CI/CD | AI Prompt | Manual testing

Maringá, Paraná, Brazil

Summary

With over 5 years of experience as a QA Engineer, I merge traditional quality assurance with technological innovation. I focus on elevating delivery standards through strategic automation and AI to optimize the entire SDLC, mitigate risks, and accelerate Time-to-Market.# Core Stack & Expertise:• Automation & AI: Expert in Cypress and Playwright (Web/API), leveraging AI for synthetic data generation, static testing, and script optimization for high maintainability.• API Testing: Advanced proficiency in Postman, Bruno, and Swagger, focusing on complex third-party integrations and microservices.• Platforms: Solid experience in Mobile Banking, complex ERP systems, Web, and Desktop applications.• DevOps & Data: CI/CD integration via Docker, Jenkins, GitLab, GitHub, and Azure DevOps. • Data validation with PostgreSQL and SQL Server.• Processes: BDD-driven development, Agile (Scrum), and test management using Qase and Jira. Key Achievements:• Fintech & Government APIs: Spearheaded the validation of Brazilian government APIs for a loan platform. Despite poor documentation, I positioned the firm among the top 5 fastest in the country to integrate, leading to a 24x increase in sales.• E2E Automation Efficiency: Architected Web/API projects from scratch using Cypress and Playwright (POM). By prioritizing business risks and leveraging AI, I reduced regression suite execution time by 50%.• AI Innovation: Deployed AI layers to cross-reference commits with requirements before manual testing. Automated bug reporting in Jira, shifting quality left and allowing the QA team to focus on high-priority areas.• ERP Migration Leadership: Led the QA strategy for a critical ERP-to-Web migration. Worked in Pair Programming from requirements to delivery and conducted technical training for internal teams, achieving high client satisfaction.

Experience

Gazin Tech

Quality Assurance | QA Engineer

August 2025 - Present (1 year 2 months)

Maringá. Paraná, Brazil

Responsibilities:

• Automated Testing & Frameworks: Architected and maintained robust E2E automation frameworks from scratch using Cypress (JS/TS) and Playwright for web applications, alongside Appium and Robot Framework for mobile, significantly reducing manual regression times.

• Backend & API Quality: Engineered comprehensive API testing strategies utilizing Postman and Swagger to identify integration bottlenecks early. Executed advanced PostgreSQL queries to validate data integrity, updates, and backend consistency.

• AI-Driven QA Engineering: Pioneered the integration of Generative AI tools (Gemini, GitHub Copilot, LLMs) into the QA workflow, accelerating Cypress/Playwright script generation, automating test documentation, and validating code commits directly against business rules.

• CI/CD & Infrastructure: Integrated automated test suites into continuous integration pipelines leveraging GitLab and Jenkins. Provisioned isolated, containerized test environments using Docker and monitored application health and performance via Datadog and Grafana.

• Process Optimization & BDD: Championed Behavior-Driven Development (BDD) practices to bridge technical execution with product requirements. Streamlined Agile testing lifecycles using Jira and Confluence to enhance cross-functional team alignment.

I am currently contributing to a Insurance sector project, implementing a comprehensive automated testing suite for both UI and APIs using Playwright and TypeScript.

A key highlight of this project is the integration of Generative AI into the QA lifecycle. By leveraging GitHub Copilot, custom AI agents, and MCPs (Model Context Protocol) for Playwright and Atlassian, we've achieved a seamless workflow between Jira documentation and script development. This approach has significantly accelerated our delivery speed. The entire framework is built on a Page Object Model (POM) architecture, ensuring clean, scalable, and highly maintainable code across the testing ecosystem.

Gooroo Crédito

Quality Assurance | QA Enginner

July 2025 - July 2025 (1 month)

São Paulo, São Paulo, Brazil

Responsibilities:

• Test Automation & Performance: Engineered and maintained robust E2E and API automated testing suites for complex web-based financial applications using Cypress (JS/TS), Postman, and Bruno. Executed performance and load testing strategies utilizing k6 to ensure system stability.
• Cloud Infrastructure & Backend Validation: Validated data integrity across relational databases (PostgreSQL) and serverless architectures (AWS Lambda). Monitored application health, deployments, and infrastructure performance leveraging Datadog and Argo CD.
• CI/CD Pipeline Integration: Streamlined continuous delivery by embedding automated test executions directly into Azure DevOps and Bitbucket pipelines, reducing manual bottlenecks and accelerating release cycles.
• AI-Assisted QA Engineering: Leveraged Generative AI tools (ChatGPT, Gemini, GitHub Copilot) to accelerate test script development, optimize daily engineering workflows, and increase overall productivity.
• Agile Quality Management: Managed end-to-end defect lifecycles and comprehensive test documentation using Jira and Confluence. Fostered strong cross-functional communication within Scrum teams to align technical deliverables with business requirements.

Finnet

Quality Assurance | Test Analyst

February 2025 - June 2025 (5 months)
São Paulo, Brazil

Responsibilities:

• Test Automation & Performance: Engineered and maintained robust E2E and API automated testing suites for complex web-based financial applications using Cypress (JS/TS), Postman, and Bruno. Executed performance and load testing strategies utilizing k6 to ensure system stability.
• Cloud Infrastructure & Backend Validation: Validated data integrity across relational databases (PostgreSQL) and serverless architectures (AWS Lambda). Monitored application health, deployments, and infrastructure performance leveraging Datadog and Argo CD.
• CI/CD Pipeline Integration: Streamlined continuous delivery by embedding automated test executions directly into Azure DevOps and Bitbucket pipelines, reducing manual bottlenecks and accelerating release cycles.
• AI-Assisted QA Engineering: Leveraged Generative AI tools (ChatGPT, Gemini, GitHub Copilot) to accelerate test script development, optimize daily engineering workflows, and increase overall productivity.

• Agile Quality Management: Managed end-to-end defect lifecycles and comprehensive test documentation using Jira and Confluence. Fostered strong cross-functional communication within Scrum teams to align technical deliverables with business requirements.

Sabium Sistemas

Quality Assurance | Test Analyst

January 2024 - February 2025 (1 year 2 months)

Maringá, PR

Responsibilities:

• Automated Testing & Frameworks: Designed and executed comprehensive E2E and API test automation strategies for complex Tax and Accounting ERP systems, as well as web/mobile applications, utilizing Cypress, Playwright, and TypeScript/JavaScript.

• Backend & Database Validation: Conducted robust API integration testing using Postman and Swagger. Performed advanced PostgreSQL queries to validate complex financial data, ensuring database integrity and system accuracy.

• CI/CD & Containerization: Provisioned and managed isolated, containerized test environments utilizing Docker. Integrated automated test suites into continuous delivery pipelines via GitHub and GitLab, streamlining the release process.

• AI-Assisted QA Engineering: Leveraged Generative AI tools (ChatGPT, Gemini, GitHub Copilot) to accelerate automation script development, optimize daily engineering workflows, and enhance overall testing efficiency.

• Quality Management & Traceability: Managed the end-to-end defect lifecycle using Jira and maintained meticulous test case documentation and execution reports to ensure alignment with strict compliance and business requirements.

NCS Intelligent Systems

Test Analyst | Tester

December 2021 - December 2023 (2 years 1 month)

Maringá, PR

Responsibilities:

• Automated Testing & Frameworks: Engineered and maintained E2E automated test suites for web and mobile applications, as well as specialized construction retail ERPs, utilizing Cypress (JS/TS). Managed version control and test scripts via GitHub.

• Automated Testing & Frameworks: Engineered and maintained E2E automated test suites for web and mobile applications, as well as specialized

construction retail ERPs, utilizing Cypress (JS/TS). Managed version control and test scripts via GitHub.

• Backend & Database Validation: Executed advanced PostgreSQL operations (queries, inserts, updates) to validate complex business rules, ensuring strict data integrity and backend consistency across the ERP ecosystem.

• Defect Management & Traceability: Managed the end-to-end bug lifecycle and task tracking utilizing Redmine and Movidesk. Created and maintained comprehensive test planning matrices and execution reports to ensure full test coverage and traceability.

• API & Integration Testing: Conducted reliable API testing and payload validation utilizing Postman to ensure seamless communication between the ERP modules and external web/mobile interfaces.
